Replacing thermal printers for bundle label units with laser printers

Commercially available Kyocera EXOSYS PA6000x laser printers with a paper cassette for 500 or 1,500 A4 sheets are used for the retrofit.

Retrofit

The existing Ferag bundle label applicator and the existing printer carriage can continue to be used and only need to be modified slightly for the version with 500 sheet storage. The printer carriage is replaced for the 1,500-sheet version.

The retrofit is suitable for various MultiStack systems, which are checked for suitability in advance.

Your **benefit** is:

- Reduced operating and maintenance costs
- Lower costs for consumables
- Low conversion costs

Discover the bundle label production based on laser printers at NPG Druckhaus GmbH & Co. KG

We are here **for you**

Ferag has developed the necessary MultiStack software customization for the use of laser printing technology, as well as the special firmware for the use of the specified Kyocera laser printer.
